While giving ./config.sh command it shows:

```
System during compilation: Welcome to openSUSE 11.1 - Kernel r ( l ).
                           x86_64
System now                  : Welcome to openSUSE 11.1 - Kernel r ( l ).
                           x86_64
```

and when I run the code it gives:

```
bhatt@ikp398:~/PANDA/pandaroot/macro/run> root -l sim_complete.C
root [0]
Processing sim_complete.C...
Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:
Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:
Error: type FairRunSim not defined
FILE:/home/bhatt/PANDA/pandaroot/macro/run/./sim_complete.C LINE:33
Warning: Automatic variable FairRunSim*fRun is allocated sim_complete.C:33:
Error: Undeclared variable FairRunSim*fRun sim_complete.C:33:
*** Interpreter error recovered ***
root [1]
```

One thing I found when I give source check\_system.sh in buildpanda dir myself, it is giving such statement:

```
bhatt@ikp398:~/PANDA/pandaroot/buildpanda> source check_system.sh
System during compilation:
```

```
System now                  : Welcome to openSUSE 11.1 - Kernel r ( l ).
                           x86_64
```

```
You try to run the software on a different
linux flavour than it was compiled on.
This is normaly a serious error, so we stop
the execution at this point.
If you know what you do you can change the
config.sh script to bypass this security issue.
