Dear collaborators,
today at 14:30 there is the EVO meeting on Pattern Recognition issues.

Here is the agenda :

- 1) 'update on the secondary track finder' by Lia Lavezzi;
- 2) 'short update on pattern recognition using neural network'
by Pablo Genova;
- 3) Yutie Liang will tell us about the progress on the online
pattern recognition since last collaboration meeting;
- 4) Marius Martens will explain briefly the method of the triplets
shown at the last meeting;
- 5) 'progress in the offline pattern recognition' by Gianluigi Boca;
- 6) AOB.

Please remember that now it is better not to put your presentation on the shared files (it is not seen with Seevogh) rather please put it somewhere on internet.

See you later! Gianluigi
