I extract folder manually but it gives same error.
Even I observed that during Installation it unpack the glpk but gives the error like "glpk could not be created." and stop the installation.

Directory: home/buildp
Found cmake version 2.8.6 which is newer than the
required version 2.8.6 in PATH
This version is okay. Don't install cmake as external package.
*** Compiling gtest
*** Package gtest already unpacked ***
*** gtest compiled successfully ***
*** Compiling glpk
*** Unpacking glpk-4.39.tar.gz
*** ERROR: glpk could not be created.
*** End installation of external packages with Errors***
