Hi,

i am using the pbarprod@pandaroot::apr13 release on the Grid and the simulation macros from the pandaroot april13 release in macro/run.

While on most Panda sites my macros are running fine, on machines with hostname smigrid# i get the following error:

```
Processing runSim.C("PHSP-10-672.root",10,672)...  
dlopen error: libPythia6.so: cannot open shared object file: No such file or directory  
Load Error: Failed to load Dynamic link library  
/home/smigriduser/.alien/packages/pbarprod/panda_extern/sep12/fairsoft/install/lib/root/libEGPythia6.so  
Warning: Return value of void basiclibs() ignored  
/home/smigriduser/.alien/packages/pbarprod/pandaroot/apr13/pandaroot/gconfig/basiclibs.C:25:  
dlopen error: /home/smigriduser/.alien/packages/pbarprod/pandaroot/apr13/build/lib/libStt.so:  
undefined symbol: gMinuit  
Load Error: Failed to load Dynamic link library  
/home/smigriduser/.alien/packages/pbarprod/pandaroot/apr13/build/lib/libStt.so
```

Best regards

Andreas
