Dear all,

I have troubles in compilation with my Mac. EvtGen does not compile due to some gfortran problem:

```
[ 45%] Built target EvtGen_exe_simpleEvtGenRO
[ 46%] Generating G__EvtGenDirectDict.cxx
Scanning dependencies of target EvtGenDirect
[ 46%] Building CXX object
pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/PndEvtGenDirect.cxx.o
[ 46%] Building CXX object
pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/G__EvtGenDirectDict.cxx.o
Linking CXX shared library ../../lib/libEvtGenDirect.so
ld: library not found for -lgfortran
clang: error: linker command failed with exit code 1 (use -v to see invocation)
make[2]: *** [lib/libEvtGenDirect.0.0.0.so] Error 1
make[1]: *** [pgenerators/EvtGenDirect/CMakeFiles/EvtGenDirect.dir/all] Error 2
make: *** [all] Error 2
```

Before the cmake updates everything was smooth. Could some mac expert take a look?
