Hello everybody,

a little update on where we stand with the HV cable. I got 2 more 1000m rolls of the cable from CERN stock (production date week 5 of 2005). under HV it behaves well: 0 nA up to 4500V, then rising (40nA at 5000V). Therefore I consider this cable to be safe. We will keep the 2000m at Heidelberg for now, please ask me soon enough if you need more HV cable so we can ship some.

cheers

Clemens
