Hi

If I want to plot any two things in pid by using the below expression then what should I write in place of MCTrack.fMotherID!=-1.

```
cbmsim.Draw("MCTrack.fStartX:MCTrack.fStartY>>aa(200,-200,200,200,-200,200)  
","MCTrack.fMotherID!=-1","colz")
```
