Soon we have to decide whether this years upgrade of the batch farm is done with 32bit or 64bit systems, whether we stick with Xeon's or switch to Opteron's.

First test results were reported in the last 'DV Ausschuss', see Report of W. Schön.
(accessible only within GSI)

On the HEPix Autumn Meeting Stephan Wiesand summarized the experience gained at DESY, see his HEPix presentation.

Further input, comments, and suggestions are very welcome.
