Hi Simon,

just as a fast feedback, I run your chain for 500 events, and after checking for one 'strange' pointer (0x10011) it was working properly. So it doesn't seem to be a very frequent bug. However I'll take a closer look to this nasty behaviour next week.

Simon Reiter wrote on Fri, 09 August 2013 14:49PS: Why is RhoCandidate* TheMother() two times implmented, one normal and one const?

Good question, which I would redirect to Ralf. Sometimes you need const input as parameters for other methods, and maybe this const RhoCandidate* TheMother() is to avoid a const_cast inbetween. But that was just guessing...

Best,
Klaus
