Subject: Re: Tutorial macro - tut_pid.C - crash due to kSigFloatingException
Posted by StefanoSpataro on Sun, 11 Aug 2013 15:50:01 GMT

I have simulated around 50k events with your macros under sep12, and other 50k events under apr13. I got never such a crash...

I would suggest to clean your sim macros as discussed, and try again. If it does not crash, maybe the error is very rare.
If it crashes again, the other solution is to put several cout in the pidcorrelator to see where the crash comes from. I could do it, since it does not crash in my Ubuntu.
