Subject: Re: Why is there a hardcoded $PATH in config.sh?
Posted by Andreas Herten on Mon, 12 Aug 2013 08:01:57 GMT

Hey Florian,

Ok, debugging experience is a very good reason for doing it this way. I accept . And will think about modifying my own config.sh.

Just for curiosity, another question:
Wouldn't the way I suggested defining $PATH in the previous answer also solve any wrongly set variable? Prepending the PandaRoot-specific paths like

export PATH="$SIMPATH/bin:OTHERPATHS/:$PATH"

For ROOT / GEANT executables would then be searched first in the PandaRoot directories.

(PandaRoot version switching and $PATH lengthening would be a problem. That's true. There would be a script needed to strip the old PandaRoot/bin directory out of $PATH before adding it again (maybe based on the previous $SIMPATH value)...)

See you,
-Andreas
