Hi Soeren,

the HitSorters have to run for each time based simulation you do. They order the data according to the TimeStamp. In the MVD this is automatically done and switched on if you enable time based simulation. You can have a look into the PndMvdDigiTask where this is done.

For the STT (and all the other detectors) one has to do it by hand or use the same structure of macros which are used for the MVD.

Cheers,

Tobias
