Hello Stefano

i feared such an answer :-/

I will try the ip-propagation setting.

No, I didnt select for the fit status. Since I was choosing track with a lot of this, I thought this should have went fine. I will check if and how much tracks with $\text{Flag} \leq 0$ I have.

I checked the sorting if the hits in the track finder, and its look reasonable for me.
The start vectors are also always at the first hit, as they should be (see picture).

I will report from my results

Best Regards

Simone
