---

```
theAnalysis->FillList(kp, "KaonAllPlus");
```

```
if (kp.GetLength()!=0)
{
    for (j=0;j<kp.GetLength();++j)
    {
        truth=kp[j]->GetMcTruth();
        if(!truth) continue;
        if(truth->PdgCode()==321)
        {
            recokp.Put(kp[j]);
        }
    }
} //end of if(kp.GetLength()!=0)
```

And you use your recokp TCandList, with the identified mc kaons.  
It should work in this way, I suppose.
