
Subject: [FIXED] RhoCandidate - probability connection ?

Hi there !

Is there a way to go from the RhoCandidates in a RhoCandList to the corresponding PndPidProbability, to have access to the probability information stored there ?

Typically I want to do something like:

```
RhoCandList eplus;  
  
while (theAnalysis->GetEvent() && i++<nevts) {  
  
    theAnalysis->FillList(eplus,"ElectronAllPlus");  
  
    for (j=0;j<eplus.GetLength();j++) {  
        Int_t pointer = eplus[j]->Pointer(); // hypothetical connection  
        PndPidProbability *prob = (PndPidProbability*)emc_array->At(pointer);  
        Float_t proba = prob->GetElectronPidProb();  
    }  
}
```

Thanks in advance,
Ronald Kunne
