Hello,
I checked with 20000 events
that the hits numbers are correct in PndTrkTracking.cxx
at the moment when the PndTrackCand and PndTrack TClonesArray
are loaded.
As far as I can tell no 'not existing' Mvd hits nor Stt hits are
loaded in those TClonesArray.

I also modify PndTrkTracking.cxx (rev. 21380) such that if
'no-existing' hits are loaded a message like :

"from PndTrkTracking, problem event "

appears followed by details of the event number and candidate.
Please update the directory
tracking
and see if that message appears
thanks
Gianluigi

Martin J Galuska wrote on Thu, 22 August 2013 15:33Hello Gianluigi,

thank you for looking into the problem! The error has disappeared for PndTrkTracking2.

Unfortunately, I do still get the error for several events with trunk rev. 21353 when I switch to
PndTrkTracking. It seems to happen less often, though.

Kind regards,
Martin
