Dear all,

here is the first draft of the PandaRoot results to be presented at the CHARM'13 conference next week.

<http://indico.uni-giessen.de/indico/getFile.py/access?resId=0&materialId=slides&confId=158>

There are several new results. Although the talk will be refereed by a member of the speakers board, of course we would be grateful for any remarks by anyone else. At this stage finding typos is not so important, but finding mistakes in the procedure or in the numbers or similar would be important and very much appreciated. The name of the main "analysts" are mentioned (if there is no name, it means that I made it myself).

best regards, Soeren

(on behalf of everyone who went through all the crashes, workarounds, fixes, forum postings etc. etc. in the last few weeks)

P.S. do we have a somewhat new list of "PandaRoot contributors"?
