If you take a look into this macro, you can see you forgot the event loop on the tree:

```
Int_t nEntries = t->GetEntriesFast();
for (Int_t j=0; j< nEntries; j++)
{
    t->GetEntry(j);

    for (Int_t k=0; k<ftof_array->GetEntriesFast(); k++)
    {
        PndFtofPoint* tofpoint = (PndFtofPoint*)ftof_array->At(k);
        cout<<"This is Ftof entry number "<< k<<endl;
    }
}
```
