Hi, Stefano

If I try this code with apr13 release PADNAroot version, then everything is fine. But with recent trunk version, I have still following error at reco part (rec.C).

Quote:
[INFO] The number of entries in chain is 5
terminate called after throwing an instance of 'std::out_of_range'
what(): vector::_M_range_check
root [0] your simulation is crashed!!!!!!!!!

In order to test and reproduce this error, copy all files to tmporal directory,
then load build panda by . ./config.sh
and finally just ./do_simulation.sh

Thank you for your help.
Donghee
