Hi, Stefano

If I try this code with apr13 release PADNAroot version, then everything is fine. But with recent trunk version, I have still following error at reco part (rec.C).

Quote:

```
[INFO ] The number of entries in chain is 5
terminate called after throwing an instance of 'std::out_of_range'
  what(): vector::_M_range_check
root [0] your simulation is crashed!!!!!!!!!!
```

In order to test and reproduce this error, copy all files to tmporal directory,
then load build panda by `./config.sh`
and finally just `./do_simulation.sh`

Thank you for your help.
Donghee
