Subject: macros/scrips to run jobs on prometheus + Wiki page

Hi all,

I just wanted to let you know that I checked in a couple of scripts and macros in macro/prod,
which allow an easy use of the Prometheus cluster at GSI to produce and handle larger
amounts of events.

The README file in the directory as well as a new Wiki page

 http://panda-wiki.gsi.de/cgi-bin/viewauth/Computing/PandaRootSimulationP rometheus

explains how the scripts and macros can be used.

Please try and let me know if something is not working or would be nice to have in addition.

Best regards,
Klaus
