Subject: [FIXED] Fts undefined references
Posted by Stefan Pflueger on Mon, 24 Feb 2014 18:20:00 GMT

Hi,

in the current Pandaroot revision there are two problems with the PndFtsDataAccessor class.
First it uses TSpectrum2 stuff, but is never linked to libSpectrum (dunno why it compiles in the
first place, undefined ref must be allowed). So adding "Spectrum" to the Dependencies
variable in the CMakeLists file in the fts dir solves this problem.
Second the Reset() function is not implemented in PndFtsDataAccessor.cxx.

I cannot fix this since I do not have permissions...

Best regards,

Stefan
