Hi Lu,

I just checked out mar14 and run the example with

```
root -l -b -q 'simfast.C("psi","psi2s_jpsi2mu_2pi.dec",6.23,1000,"psi(2S)")'  
root -l -b 'ana_jpsi.C("psi_fast.root")'
```

and it runs without any problem.

Did you start a new shell for checking out and compiling and stuff? It can always be that your environment is spoiled, which leads to strange effects.

Best,  
Klaus
