Hi Stefano,

somehow something is wrong with the release. If I call cmake from the build directory I get

-- Looking for Root... - Not found

CMake Error at cmake/modules/FindROOT.cmake:97 (Message):

ROOT not installed in the searchpath and ROOTSYS is not set. Please set
ROOTSYS or add the path to your ROOT installation in the Macro
FindROOT.cmake in the subdirectory cmake/modules.

Call Stack (most recent call first):

CMakeLists.txt:116 (find_package)

This is not the case when I check out trunk, there cmake works as usual. I actually don't know how to fix this.

Best,
Klaus
