Hi all,

According to request of Klaus and Stefano, I have implemented the possibility to change a status of particles: stable or unstable in DPM.

Now, when you run DPMGen, after lines

```
-----  
Enter Elastic : 0., 1. or 2.  
0. - No elastic scattering, only inelastic  
1. - Elastic and inelastic interactions  
2. - Only elastic scattering, no inelastic one  
0.
```

```
-----  
there will be lines
```

```
-----  
If you like to change particle status (stable - 1 / unstable - 0)  
Enter: particle PDGcode and status  
(for example -- Pi0 unstable: 111 0)  
To go to event generation, Enter: 0 0
```

```
-----  
If you Enter
```

```
-----  
111 0  
0 0  
-----
```

Pi0 will be unstable, other particles save their statuses.

Aida
