So, I am trying to examine $p\bar{p} \rightarrow D^0 \text{-} \bar{D}^0 \rightarrow K^+ \pi^- K^+ \pi^-$

The momentum is 8 GeV/c...10000 events...

I want to do some basic analysis, kinematics and so on..

So for example I want to draw $\psi(4160)$ mass..

In the last for loop for the $\psi(4160)$ I want to take column "psi4160m" and draw it...

The problem is that the ntuples I get from this analysis are empty in the "psi4160.root" file...

They exist but they are empty...So I guess there is a problem writing/filling the tuples..

Any ideas???

You can find the macro attached...

You will probably find some mistakes in the macro but I don't think they affect the filling/writing procedure...

Thanks
