
Subject: Warning in FairPrimaryGenerator

Hi,

when using an EvtGen decay file with a PDG code not in TDatabasePDG,
FairPrimaryGenerators prints for every single decay some warning like

-W FairPrimaryGenerator: PDG code 88880 not found in database. This warning can be
safely ignored

Is there a (verbose-)switch which allows to suppress this warning? If not, would it be possible
to implement something to get rid of this warning?

Best and thanks,
Klaus
