## Subject: FairPrimaryGenerator

Posted by Klaus Götzen on Wed, 30 Apr 2014 11:28:22 GMT

Hi,

when using an EvtGen decay file with a PDG code not in TDatabasePDG, FairPrimaryGenerators prints for every single decay some warning like

 -W FairPrimaryGenerator: PDG code 88880 not found in database. This warning can be savely ignored

Is there a (verbose-)switch which allows to suppress this warning? If not, would it be possible to implement something to get rid of this warning?

Best and thanks,
Klaus
