Hi Karin,

which talk are you referring to? In the current `simfast_opt.C` 'det_full' is not an available option. Take a look here

https://subversion.gsi.de/trac/fairroot/browser/pandaroot/release/scrut14/macro/scrut/simfast_opt.C#L25

However, the results of `simfast.C` and `simfast_opt.C` without any specification of a detector option string should give the same results. Perhaps I didn't update parameters always in both files, and something got asynchronous. Since I consider `simfast_opt.C` as the default (because it has more functionality), I'd propose to only use that one.

I'll certainly check for this inconsistency, thanks for pointing it out.

Best,
Klaus
