The right macro is this:

```
for (j=0;j<psi4160.GetLength();++j)
{

    npsi4160->Column("ev", (Float_t) i);
    npsi4160->Column("cand", (Float_t) j);
    npsi4160->Column("ncand", (Float_t) psi4160.GetLength());
    npsi4160->Column("nmct", (Float_t) npsi4160mct);

    PndKinFitter fitter(psi4160[j]);
    fitter.Add4MomConstraint(ini);
    fitter.Fit();
    RhoCandidate *psif = psi4160[j]->GetFit();

    npsi4160->Column("psi2sfit", (Float_t) psif->M());
```

SORRY!!!
