So in my macro I set pbarm=8.000 and so energy is $\sqrt{8*8+0.938*0.938}+0.938$ which gives 8.9928 if you make the math.

But from the EvtGen I get p=8.352 and energy=9.342...

Do I have to put these numbers in my initial 4vector??
