Dear Elisabetta,

in genfit2, a namespace genfit is used. Besides some GFRave classes, nothing is named GF... anymore. So whenever you get warning/errors that GF... has not been found, you forgot to change this in the code.

Also, per default, there will be one library, named libgenfit2. No more libRKTrackRep, libGFRave etc.

If you check in your changes into the genfit2 development branch I created, it would be much easier for me to help you.

Kind regards,

Johannes
