Good day.

I'm trying to run `simpleEvtGenRO` with scurt14 #25034 (just in the same way as in this topic: <https://forum.gsi.de/index.php?t=tree&th=4281&start=0&>) and get the following error:

```
./simpleEvtGenRO pbarpSystem dspair.dec 10 8.0 -1
...
EvtGen:Main decay file name :DECAY.DEC
EvtGen:PDT table file name :evt.pdl
EvtGen:In readDecayFile, reading:DECAY.DEC
EvtGen:PYCONT is neither a particle name nor the name of a model.
EvtGen:It was encountered on line 192 of the decay file.
EvtGen:Please fix it. Thank you.
EvtGen:Be sure to check that the correct case has been used.
EvtGen:Terminating execution.
```

I take the DECAY.DEC and evt.pdl from /pgenerators/EvtGen/EvtGen/Private.

I will be very grateful for any help.

Best regards,
Stanislav
