Hi Klaus,

I think that the feature looks quite useful.

But still I am wondering one thing.

I am using PndScrutAnaTask which is needed to compile the code. because it would be faster than root script.

If I want to combine analysis task in fastsim, then I have to put below line into the simfast_opt.C with switch off option as you mentioned.

```
PndScrutAnaTask *scrutTask = new PndScrutAnaTask();  
fRun->AddTask(scrutTask);
```

Is it correct way?

Have a nice weekend,
Donghee
