Hi,

it should be enough to execute the following command on your machine. This should install all dependencies.

"apt" is the package manager on debian based systems.

```
sudo apt-get install cmake cmake-data g++ gcc gfortran build-essential make patch sed \
libx11-dev libxft-dev libxext-dev libxpm-dev libxmu-dev libglu1-mesa-dev libgl1-mesa-dev \
curl bzip2 gzip unzip tar subversion git
```

Ciao

Florian
