

Hi,

yes... the TargetDSSSD times where not always present in the 2014 campaign . I don't remember if there were similar problems in 2012. It could be that this module didn't read the TargetDSSSD time signals.

Here are the WallDSSSD unpackers. The Wall DSSSD times are read by the CAENv767 multihit TDCs. They have 128 channels, which is enough for one side of all DSSSD modules in each crate. Again I'm not sure if p- or n-side times are read. As far as I remember, these were always present.

While analyzing commissioning data, I never used these time signals. Perhaps someone in the LYCCA collaboration has experience in how this information can be used.

```
crate LyccaWallCrate1
  procid 70
  module adc01 LYCCA.v785
  module adc02 LYCCA.v785
  module adc05 LYCCA.v785
  module adc06 LYCCA.v785
  module adc07 LYCCA.v785
  module adc08 LYCCA.v785
  module adc11 LYCCA.v785
  module adc12 LYCCA.v785
  module mhtdc LYCCA.v767
end
```

```
crate LyccaWallCrate2
  procid 80
  module adc13 LYCCA.v785
  module adc14 LYCCA.v785
  module adc17 LYCCA.v785
  module adc18 LYCCA.v785
  module adc19 LYCCA.v785
  module adc20 LYCCA.v785
  module adc23 LYCCA.v785
  module adc24 LYCCA.v785
  module mhtdc LYCCA.v767
end
```
