Dear Aida,  
Thank you very much for making FTF available within pandaroot!

I tried to compile it according to the instruction. But after "make -f FTFmake" got following error:

```
Linking binary FTFTGen ...  
/usr/bin/ld: tmp/main.o: undefined reference to symbol 'aTouchableHistoryAllocator'  
/usr/bin/ld: note: 'aTouchableHistoryAllocator' is defined in DSO  
/panda/fairroot/apr13Build/lib/libG4geometry.so so try adding it to the linker command line  
/panda/fairroot/apr13Build/lib/libG4geometry.so: could not read symbols: Invalid operation  
collect2: error: ld returned 1 exit status  
make: *** [FTFTGen] Error 1
```

Did somebody else try it with apr13 external packages?
