Hi everyone,

I have recently installed prespec code on the server I use for the data analysis. It works fine but I received a lot of messages concerning the buffer. An example of output message is here:

```
/data/avigo/62Fe_ag63_1081.lmd
opened plugin libprespecLYCCA.so
trying to open file /data/avigo/62Fe_ag63_1081.lmdcheck header: swap=0, header=1,
buffer=0, size=32768
Check buffer: swap=0, header=1, buffer=1, size=32768
Read header again, 32768 bytes
type 2000, subtype 1
strings 12 41 8 0 0 0
Allocate 32768 bytes
-> success
Read buffer 32768
Buffer: 16358 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
Buffer: 16360 words
Read buffer 32768
```

and so on....

may I ask you if this is a problem for the sorting and how could I solve it?

thanks in advance for the help,

cheers,

Riccardo
