Subject: Re: new FTF generator in pandaroot Posted by Anastasia Karavdina on Sun, 21 Sep 2014 11:43:57 GMT View Forum Message <> Reply to Message

Hi Donghee,

Unfortunately I can't help much. I believe it's OS or compiler related problem. The compilation trick, which I mentioned before, works for Fedora. Compilation on our computing cluster (HIMster) works out of box. However, at my home PC with Kubuntu(14) it does not work. I just tried it now and got many "undefined reference to" errors, which in the end lead to "error: Id returned 1 exit status"

Maybe our computing experts could have a look?

Cheers, Anastasia
