Hi Aida,

What about random seed during the production?  
If I do two times without change option string, output will be different?  
./FTFGen PbarP.mac | mv FTF.root FTF\_1.root  
./FTFGen PbarP.mac | mv FTF.root FTF\_2.root

or Do I need some more action to get different events from output?

Best wishes,  
Donghee
