
Subject: vertex reconstruction without fitting?

Dear colleagues,

could anybody tell me - is it possible in PandaRoot to determine the production vertexes of the final particles (for example electrons and muons in the future) without the reconstruction of the full tree chain of their parents? It is needed for the background study when we do not care about the parents of the final particles, but just of their characteristics.

Could you please give the example of such a code?

Thank you in advance,
Anna
