Hello Elisabetta,

answering your second post first: I was asked to move all the event filter related code of FairPrimaryGenerator to its own class which I called FairFilteredPrimaryGenerator. FairFilteredPrimaryGenerator can be used with and without event filtering as it just adds code to FairPrimaryGenerator.

Therefore please try using

```
FairFilteredPrimaryGenerator* primGen = new FairFilteredPrimaryGenerator();
```

instead of

```
FairPrimaryGenerator* primGen = new FairPrimaryGenerator();
```

as explained here.

Does that also "fix" the problem you described in your first post?

Kind regards,  
Martin
