Hi Martin,

I have seen the event display, then I got there is some thing like VizVolumedaughters (see in screen shots), vizvolume etc. If I deselect it for a volume that becomes invisible attached screen shots. There should be some function in class corresponding to it in GeoNode (or in other class eclipse user can easily find) as it is showing just above it. Some one expert in the c++ classes (I don't know how to put) can put this in the code then the selected volume can be removed. I think It should work.

Shyam
