Dear all,
I am a beginner in Panda software. I am trying to install Pandaroot using the following link

https://panda-wiki.gsi.de/foswiki/bin/view/Computing/PandaRootInstallGit

and my machine description is, Ubuntu 14.04.1 LTS, x86_64.

The installtion of external package (fairsoft_jul14p3) is successfull, the log file is attached herewith. Also the Fairsoft is successfully intalled. But while installing the pandaroot (oct14), I am facing problem. It shows the following two errors :

make[2]: *** [pgenerators/DpmEvtGen/CMakeFiles/DpmEvtGen_exe.dir/main.cc.o] Error 1
make[1]: *** [pgenerators/DpmEvtGen/CMakeFiles/DpmEvtGen_exe.dir/all] Error 2

Please someone help me in debugging these errors. Thanks.
