Hi,

I had the same problem than Martin here  
(<https://forum.gsi.de/index.php?t=msg&th=4230&start=0&> ->instaling external Packages on Ubuntu-Gnome 14.10) and I tried to edit the files "tools/rootconfig.sh" and "tools/root/rootconfig.sh" adding

--enable-builtin-freetype

to the ./configure option, like that:

```
./configure $arch --enable-builtin-freetype --enable-soversion $XROOTD $ROOFIT \
--enable-minuit2 --enable-gdml --enable-xml \
--enable-builtin-ftgl --enable-builtin-glew \
--with-pythia6-libdir=$pythia6_libdir \
--with-pythia8-libdir=$pythia8_libdir \
--with-pythia8-incdir=$pythia8_incdir \
--enable-mysql --enable-pgsql \
--disable-globus \
--disable-reflex \
--disable-cintex \
--with-monalisa-libdir=$monalisa_dir/lib \
--with-monalisa-incdir=$monalisa_dir/include \
--with-gsl-incdir=$gsl_dir/include \
--with-gsl-libdir=$gsl_dir/lib \
--with-f77=$FC $prefix_string \
$etc_string $debugstring
```

Then I called again ./configure, and it didn't work for me. It shows the same error.  
I then tried to download the external packages with the patch, but I am not sure how to do it. I tried:

```
svn co https://subversion.gsi.de/fairroot/pandaroot/release/apr13p1
```

But this link doesn't seem to exist.

```
svn: E170000: URL 'https://subversion.gsi.de/fairroot/pandaroot/release/apr13p1' doesn't exist
```

What is the correct way to download the external packages with the patch?  
Thanks a lot for your help, and sorry for the inconveniences...

Cheers,  
Mamen
