Hello Ralf,

here I attach a simplified version of my macro, and the pid.root and simparams.root. It is only for 20 generated events, as a test. Even if I change the name for the block qaRecoFull, the variables are not seen in the tree.

I even tried to comment out all blocks, except the block called "qaRecoFull". No way to get those variables in my ntuple. Then, I suspect that I am still missing something.

If you could kindly have a look, it would be great!

As you see, the histogram of the chi2 is filled. I am trying to get the variables of the block "qaTrk", actually.

Thank you in advance,

Elisabetta
