Subject: Re: prespec code Posted by a_boso on Mon, 23 Feb 2015 11:54:49 GMT View Forum Message <> Reply to Message

Hi everybody,

I was trying to download the last version of the code, so I did:

- agatagsi@lx-pool.gsi.de:git/prespec

- ./configure --prefix=\$HOME --with-gsievt-lib-path=/home/boso/prespec/eventapiV50

--with-gsievt-include-path=/home/boso/prespec/eventapiV50

- make install

I set the environment variables; I check and I have /home/boso/lib in the LD_LIBRARY_PATH

Everything seems fine; but when I launch the code I get the following errors:

cannot open module file "libprespecLYCCA.so": /home/boso/lib/libprespecLYCCA.so: undefined symbol: GOMP_parallel_end module file is not open ERROR: Controller config: In file ./Daq/unpack_user.config line 22: library LYCCA has no unpacker with name v830 module file is not open ERROR: Controller config: In file ./Daq/unpack_user.config line 23: library LYCCA has no unpacker with name v1290TMM ERROR: Controller config: In file ./Daq/unpack_user.config line 27: couldn't find any modules module file is not open ERROR: Controller config: In file ./Daq/unpack_agata.config line 31: library LYCCA has no unpacker with name v1290TMM module file is not open ERROR: Controller config: In file ./Daq/unpack_agata.config line 32: library LYCCA has no unpacker with name v830 ERROR: Controller config: In file ./Dag/unpack agata.config line 36: couldn't find any modules module file is not open ERROR: Controller config: In file ./Dag/unpack_user.config line 22: library LYCCA has no unpacker with name v830 module file is not open ERROR: Controller config: In file ./Dag/unpack_user.config line 23: library LYCCA has no unpacker with name v1290TMM ERROR: Controller config: In file ./Daq/unpack_user.config line 27: couldn't find any modules module file is not open ERROR: Controller config: In file ./Dag/unpack lycca.config line 24: library LYCCA has no unpacker with name v785 module file is not open ERROR: Controller config: In file ./Dag/unpack_lycca.config line 25: library LYCCA has no unpacker with name v785 module file is not open ERROR: Controller config: In file ./Dag/unpack lycca.config line 26: library LYCCA has no unpacker with name v785 module file is not open . . .

and so on ..

So it is a problem related with GOMP_parallel_end which doesn't permit to load the libprespecLYCCA.so library; it seems OpenMP was not properly linked during the compilation, or something similar; do you have any ideas on how to fix it?

Thank you, Cheers,

Alberto
