Hi Stefano,

In GSI Linux, FTF works in new version of PandaRoot. Just now, I have installed and checked.

In Mac, to overcome errors
please, add in /FtfEvtGen/common.mk
in line
LDLIBS += \$(PANDALIBS) -L\$(GEANT4\_LIBRARY\_DIR) -IG4clhep -IG4global
-IG4geometry -IG4physicslists \$(GLIBS)

-IG4processes

before \$(GLIBS)

Good luck Aida
