The feature is already in the release, simply it is not used by default.
You need to switch off the back propagation and set 2 as propagation distance in the reco macro:

```
...  
recoKalman->SetPropagateToIP(kFALSE);  
recoKalman->SetPropagateDistance(2.f);  
...  
recoKalmanFwd->SetPropagateToIP(kFALSE);  
recoKalmanFwd->SetPropagateDistance(2.f);  
...
```

In reality because of a small bug it will back propagate of 1 cm and not 2 cm, but it will be fine the same.
