Subject: Re: AGATA Crystal positions (Look-Up Table) Posted by miree on Wed, 29 Apr 2015 08:05:18 GMT View Forum Message <> Reply to Message

Hi Alberto,

the look-up table was always the same.

The only thing you have to add is the aforementioned rotation. Either use the recently introduced parameter [in units of deg] in the AgataAdapter, or do the transformation yourself at a later point.

I would try + or - 7.8 and see which one improves the Doppler corrected peak resolution. However, I didn't try this myself yet.

Michael
